

Conserving one of your most valuable senses...your hearing

The Defense Occupational & Environmental Health Readiness System-Hearing Conservation is an information system designed to support personal auditory readiness and help prevent hearing loss through early detection. DOEHRs-HC collects, maintains, compares and reports hearing readiness, deployment and hearing conservation program data for DoD personnel.

Product Features

- Conducts automated baseline, annual, pre- and post-deployment hearing tests
- Incorporates tri-service business practices and performs objective hearing test calculations
- Interprets hearing test results for individual disposition and management

Benefits to the Military Health System

- Assists in the prevention of hearing loss by detecting early decreases in hearing
- Monitors hearing readiness and follow-up test requirements
- Documents individual hearing ability and assists with local and service-wide hearing readiness and hearing conservation program management
