

# Total medical asset visibility

The Joint Medical Asset Repository [JMAR] is a Web-based application that provides access to medical asset information for any user, any time, on any machine. JMAR provides a single, integrated and authoritative source for joint medical logistics information for the Department of Defense Military Health System.

## Product Features

- Provides secure and timely data on the location, movement, status, and identity of medical materiel
- Optimizes the medical supply chain via data reporting from Department of Defense business partners
- Delivers Web-based access 24/7 worldwide

## Benefits to the Military Health System

- Delivers a single medical asset repository during peacetime and wartime
- Improves operational readiness by rapidly reporting decision support capabilities for global military operations
- Enhances business intelligence and medical asset visibility from factory to frontline
